

PlanWorks Navigator View

PlanWorks views use nodes to represent various plan elements (tokens, objects, etc). From any view, the *Navigator View* can be selected by right-clicking on a specific node.

The following figure was produced by doing these two steps:

1. Right-clicking on the 'LightSwitch.turnOff' token in the Timeline View of the Light example and selecting **Open Navigator View**.
2. Clicking on the 'LightSwitch.turnOff' token (key 75) in the resulting window to expand the view.

Some comments:

- The 'LightSwitch.turnOff' shows the values of its five built-in variables: start ([0 8]), end ([1 9]), duration (1), state (ACTIVE) and object (switch1).

- More details can be viewed by hovering over various nodes.
- Clicking on the 'Rule' node will expand the picture further, and show that this is the 'Rule' that requires this 'turnOff' token to be preceded by an 'On' token and succeeded by an 'Off' token.
